2.1	Home Page.....	5
2.2	Single Friends Page. ....	6

## 1. Application Overview

### 1.1 Pages

The Friends Finder Application has two pages

#### 1. Home Page

This page consists of 4 main sections

- a. Navigation bar
- b. Search Section
- c. List of friends
- d. Footer

#### 2. Single web page

This page shows the details of any user chat

### 1.2 Reusable components

To scale our application, we need to use reusable components across the application. These components can be used in different pages. And multiple times in a single page.

In our application we can have 4 main reusable components they are as follows

#### 1.2.1 Navbar

Navbar element should be present in every page so it is good idea to have it as a separate component

Footers on websites should be visible in every page so it can also be a separate component on its own.

### 1.2.2 Friends Card Component

Details of friends can be shown in an intuitive way using card design. This component can be reused for different friends.

## 2. Pages

### 2.1 Home Page

This is the page user lands at first when the user starts using our application.

## 2.2 Explore Page

This page shows the details of any single friends
