

Web based chat Application

By Rohan agrawal

Objective

- To build an effective and clutter free user interface to search any friends.

Features

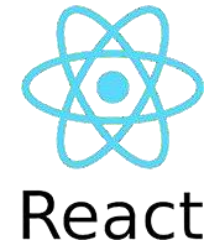

- Able to search for meta data of friends using Firebase as backend
- Able to find new friends from curated lists provided in explore page by the website maintainers.
- Minimal clutter free user experience

Technology Stack

- Frontend
 - ▮ ReactJS
 - ▮ SCSS
 - ▮ React Router DOM
 - ▮ Firebase

React Router

Pages

- Home Page
- Single Friend Page

Deployment

- We used Netlify Hosting service to host this application

Future Plans

- Implement Authentication system for user to save friends
- Use Database to save reading lists of user
